What does www.geo.admin.ch offer?

geo.admin.ch is a publicly accessible platform for geoinformation, geodata and geo services. Using a map viewer, you can view, print out, order and obtain digital geodata. The data required is available in different scales as digital maps and images, vector datasets and also as an online service.

Who uses www.geo.admin.ch?

The portal is aimed at the wider public as well as specialists. You can find these in the “geoservices” interfaces to retrieve geographical information via the Internet.

What data can be obtained via www.geo.admin.ch ?

Using geo.admin.ch, you can obtain publicly accessible electronic Federal Administration geodata directly from the relevant Federal Office and get information about the costs and conditions of use.

The geoportal –a project prioritised by eGovernment Switzerland

The Swiss Confederation’s geoportal geo.admin.ch is one of the eGovernment Switzerland programme’s priority projects. The aim of the programme is to enable both Swiss companies and individuals to carry out important business with the authorities online. The Swiss Confederation’s geoportal is developed and operated by the Federal Office of Topography, swisstopo, on behalf of the Coordinating Agency for Federal Geographical Information to implement the Swiss Federal Geoinformation Act.
